WORK EXPERIENCE

Cisco Systems, Ltd | Software Engineer, Feltham — Aug 2025 – Present

- Doubled frontend output, keeping the UI faithful to the design system by building AI agent skills. One captures in-depth knowledge of an internal component library, and the other automatically checks rendered UI using various MCP servers. Demoed the workflow to IT leadership, receiving the feedback that it's "setting a great example for the entire IT organisation."
- Improved responsiveness of Cisco's hybrid-work platform by cutting slow database queries by ~92% (63K to 5K per week) and worst-case load times by 60% (6s to 2s), after diagnosing high-latency MongoDB aggregations and implementing the most efficient fix.
- Contributed to a 20K+ bot exemption-removal milestone that significantly reduced company-wide security risk from unregistered bots.
- Supported in two cycles of early in career hiring through CV screening and first-round interviews, and was recognised for sincerity, proactiveness and high engagement.

Opsydia Ltd | Software Engineer, Begbroke — Dec 2024 – Jul 2025

- Developed scalable .NET C# backend services with gRPC to power and integrated with Flutter clients; implemented streaming APIs and modular state machines, driving responsiveness across the SDLC.
- Led the design of a secure CI/CD pipeline in Azure DevOps with YAML and NUKE; implemented automated encryption, signing, and publishing with CodeMeter and Wibu-Systems; configured self-hosted agents for performance.
- Improved machine vision quality control, boosting accuracy from ~95% to ~99% by integrating Tesseract OCR with EmguCV and enhancing image preprocessing pipelines.
- Championed social wellbeing as part of the Mental Health & Wellbeing team; coordinated 4 events leading to 25% increase in reported employee satisfaction.

Reaction Engines | Graduate Engineer, Abingdon — Oct 2023 – Oct 2024

- Automated test campaign data capture using Python, reducing manual effort by 93%, leading digital transformation within the company, during a Systems Engineering Placement.
- Identified 11% energy efficiency improvements from CNC machines by building a Python-based carbon footprint tool, automating data collection and visualisation, applying IoT principles and ETL methods.
- Applied statistical process control (SPC) techniques in Python to eliminate redundant testing, saving 25 hours/month and reducing lead times.
- Proactively identified and pitched a proof-of-concept for a digitalisation IoT tool, inspired by attending the Digital Manufacturing Expo, demonstrating initiative in driving digital transformation and influencing team strategy.
- Founded a Gender Equity Network to foster inclusive culture and staff empowerment.

IBM | MSc Computer Science Summer Project Student, London — May 2023 – Sept 2023

- Spearheaded the development of IBM Quantum Flatworld, an educational 3D quantum computing platform using IBM Qiskit and the Unity engine.
- Engineered interactive quantum computing simulations, integrating Vue.js frontend with a Node.js backend.
- Deployed a scalable, cloud-based experience using Azure and integrated gesture control with UCL MotionInput 3 for accessibility.

Leonardo | Systems Engineering Intern, Edinburgh May 2022 – Aug 2022

- Developed a MATLAB-based radar performance analysis tool, improving systematic error computation.
- Drafted a user interface using MATLAB App Designer, complying with stakeholder requirements.

Amazon | Operations Intern, Edinburgh June 2021 – Aug 2021

- Automated key operational processes using JavaScript, HTML, and VBA, achieving a projected £42K in annual cost savings.
- Achieved £42K projected annual savings and stakeholder approval through iterative feedback and fast prototyping.
- Delivered high adoption (80%) through iterative prototyping, stakeholder feedback loops, and clear presentation of data-driven improvements.

SKILLS

Languages & Tools	DevOps & Cloud	Software Development	Data & Analysis	Project Management
• Python	• Git	• .NET	• SQL	• Agile
• JavaScript	• Docker	• gRPC	• ETL	• Scrum
• C#	• CI/CD	• REST APIs	• Data Visualisation	• Stakeholder Management
• MATLAB	• Azure	• Vue.js	• IoT Integration	• Cross-Team Collaboration
		• Node.js		

EDUCATION

University College London, London — Sept 2022 – Sept 2023

Computer Science MSc — Degree Classification: Distinction

- Coursework: App Engineering, Database Fundamentals, Computer Architecture and Operating Systems, Software Engineering, Machine Learning for Big Data, Perception and Interfaces.
- Served as Student Representative

University of Edinburgh, Edinburgh — Sept 2018 – May 2022

Computational Physics BSc (Hons) — Degree Classification: First Class

- Coursework: Data Analysis and Machine Learning, Fourier Analysis and Statistics, Quantum Computing

EXTRACURRICULAR ACTIVITIES

Oxford Animal Sanctuary | Animal Socialisation Volunteer, Oxford — Jan 2024 – Present

- Engage in animal socialisation activities to improve the well-being of shelter animals through regular interaction and care.

Personal Project — Oct 2024 – Present

- Building a website using the using the Google Maps API, React.js and Tailwind CSS, aiming to help users find the best living areas based on personalised preferences

FEAST With Us | Cooking Volunteer, London — Sept 2022 – Sept 2023

- Helped prepare meals for local community centers, addressing food poverty while working collaboratively in a team-focused environment.

HOBBIES

- Learning Spanish
- Practicing Piano
- Certified Open Water Scuba Diver (NAUI)
- Avid Latin Dancer
- Exploring Art through sketching & painting
- Enthusiastic baker & sharer
- Enthusiastically mediocre at Tennis and Squash
